

Maximum Building I

Time limit: 1.00 s

Memory limit: 512 MB

You are given a map of a forest where some squares are empty and some squares have trees. What is the maximum area of a rectangular building that can be placed in the forest so that no trees must be cut down?

Input

The first input line contains integers n and m : the size of the forest.
After this, the forest is described. Each square is empty (.) or has trees (*).

Input

Print the maximum area of a rectangular building.

Constraints

- $1 \leq n, m \leq 1000$

Example

Input	Output
4 7 ...*.*. .*.....*	12
