

Nested Ranges Count

Time limit: 1.00 s

Memory limit: 512 MB

Given n ranges, your task is to count for each range how many other ranges it contains and how many other ranges contain it.

Range $[a, b]$ contains range $[c, d]$ if $a \leq c$ and $d \leq b$.

Input

The first input line has an integer n : the number of ranges.

After this, there are n lines that describe the ranges. Each line has two integers x and y : the range is $[x, y]$.

You may assume that no range appears more than once in the input.

Output

First print a line that describes for each range (in the input order) how many other ranges it contains.

Then print a line that describes for each range (in the input order) how many other ranges contain it.

Constraints

- $1 \leq n \leq 2 \cdot 10^5$
- $1 \leq x < y \leq 10^9$

Example

Input	Output
4 1 6 2 4 4 8 3 6	2 0 0 0 0 1 0 1
